

WE CONNECT QUALITY WITH THE FUTURE.

We connect quality with the future.

ZIMMERMANN
elastische und technische Garne

WE CONNECT EFFICIENCY WITH CUSTOMER SATISFACTION.
We connect efficiency with customer satisfaction.

Ask us what's so special about Zimmermann and we'll have plenty to tell you. But what matters most is that, together with our customers, we never stop going forward.

It's as true for users of our covered elastic yarns as for our partners, who come up with cutting-edge ideas for textiles using our innovative threads.

For us, collaboration means supporting our customers, listening, ensuring the quality of our products, adapting them to individual needs or developing completely new solutions.

That's what our customers expect from us – yarns crafted from the finest raw materials, precisely covered, perfectly wound and that always guarantee the highest levels of reliability and, with it, unsurpassed efficiency.

What sets our yarns apart could also be said about Zimmermann and all our partners: you'll only survive, if you're willing to stretch yourself. That's something we remind ourselves of on a daily basis.

We connect durability with flexibility.
WE CONNECT DURABILITY WITH FLEXIBILITY.

Our approach makes it possible for us, year after year, to produce hundreds of yarn combinations in the most varied strengths and colours. For our customers, these provide the inspiration for countless creative ideas and applications. Our range currently takes in over 6000 yarns, meaning that – however much you want, when and in whatever colour – you'll always receive the quality you've come to expect from us over the years.

We deal directly with requests from our customers, offering them tailor-made proposals, flexible production and extensive personal advice through our sales and customer consultants, product developers or heads of production. We make sure that you can always reach them because we know that our customers will only be able to survive in worldwide competition if they can rely on quality and ideas.

The right solution can often seem obvious, but getting there is never that easy. It's something we've repeatedly learnt while developing new products and innovative applications. In doing so, we've become experts in marrying traditional processes with innovative ideas.

To take one very recent example, novonic[®], an elastic yarn capable of being used for the transfer of data, electrical current or heat. Then there's our cutting-edge novonic[®] E-Blocker fabric, offering almost 100% protection against electro-magnetic radiation. Innovations such as these are developed by us in collaboration with a network of experts, drawn from the most varied of fields.

We connect tradition with innovation.
WE CONNECT TRADITION WITH INNOVATION.

To create solutions today for the tasks and applications our partners will be faced with tomorrow. Because for whatever area our customers need a yarn or a system solution, we will always produce exactly the right Zimmermann yarn for them.
